Kritl is a member of the Ras gene family. Mutations in the kritl gene are responsible for certain vascular abnormalities. The primers are used to detect mutations in the Kritl gene, specifically those mutations that are associated with presence of cavernomas, for diagnosis. The kritl gene, or its derivatives, are useful in gene therapy for controlling or its derivatives, are useful in gene therapy for controlling or

The Zmax1 and HI genes have osteopathic activities. The genes can be used in gene theral antisense therapy and in the production of vaccines. They can be used the diagnosis and treatment of bone disorders including osteoporosis, the diagnosis and treatment of bone disorders including osteoporosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a diagnostic kit for detecting trisomy 21 in a human foetus, which comprises at least two pairs of oligonucleotide primers suitable for amplification, by polymerase chain reaction (PCR), of both strands of a target DNA sequence, i.e. a short tandem repeat region of human chromosome 21. The kit is used for prenatal, non-invasive diagnosis of trisomy 21. The present sequence is an oligonucleotide suitable for use in the kit of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
```

The invention relates to a method for identifying a molecule involved in lipid regulation comprising identifying a molecule that binds to or inhibits binding of a molecule to high bone mass (HBM) or its wild type

diagnosing, treating or preventing e.g., a identifying a molecule that binds to high corresponding wild type gene.

bone mass

The methods may be used in gene therapy, pharmaceutical development, and diagnostic assays for bone development disorders. Molecules identified by comparison of Zmax1 and HBM systems can be used as surrogate markers in pharmaceutical development, in diagnosis of human or animal bone disease, and in the treatment of bone disease. Sequences ABKZ2716-ABKZ3411 represent cDNA molecules encoding human Zmax1 and HBM, and PCR primers, probes, linkers and adapters of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene, Zmaxl. Compounds identified by the medical and abnormal lipid-diagnosing, preventing or screening for normal and abnormal inpid-associated conditions, including arteriosclerosis, cardiovascular disease, stroke, and osteoporosis. The compounds may also be used in treatment or prevention of diabetic atherosclerosis, neurovascular and the compounds of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; naemare
dene therapy;

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc represent specifically claimed nucleotide sequences from the present cc invention. Oligonucleotides from the present invention can be used; for differentiating between healthy haematopoietic cells and proliferative cd disorder haematopoietic cells; for differentiating between acute cc lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide coplymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for the study of bone density modulation or bone mass modulation. The transgenic animals are for the study of bone density modulation or bone mass modulation. The cinvention has osteopathic and cytostatic activity. The polynucleotides of the invention may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density modulation, where the bone mass is modulated relative to non-transgenic animals of the same species in more than one parameter selected from bone density, bone transgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone compositions, which may be employed for treating or preventing bone meplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for diagnosing diseases involved in bone development, or characterised by reduced bone density or mass. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The present invention describes a method of modulating type I muscle formation comprising contacting a cell with an agent that modulates PC modulated. Also described: (1) a method for identifying a compound capable of modulating type I muscle formation comprising contacting a cell with a compound, and determining whether PGC-1 alpha expression c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immunomodulator; antidepressant; gene therapy;

ID ADA2692
CC comprising assaying the ability of the compound to modulate the cc expression or activity of PGC-1 alpha; (3) compounds identified by the CC expression or activity of PGC-1 alpha; (3) compounds identified by the CC method of (1) or (2); (4) a method for treating a subject having a CC disorder associated with aberrant type I muscle formation comprising CC administering to the subject an agent capable of modulating PGC-1 alpha according to the subject an agent CC expression or activity; (5) a method for increasing type I muscle CC expression or activity; (5) a method for increasing type I muscle CC expression or activity; (5) a method for increasing type I muscle CC expression or activity; (5) a method for increasing type I muscle CC expressed in the skeletal muscle of the animal. Expression or activity; and (6) a non-cc constitution of the skeletal muscle of the animal. Expression vectors and CC expressed in the skeletal muscle of the animal. Expression vectors and CC expressed in the skeletal muscle of the animal. Expression vectors and CC expression to the subject an agent capable of the animal expression vectors and CC expression the pGC-1 alpha polypeptides, are also described. PGC-1 alpha has cardiant, antidabetic, anorectic, immunomodulator and CC expression type I muscle formation or activity are useful for CC modulating type I muscle formation or treating a disorder associated with abertan type I muscle formation or treating adisorder such as CC diabetes, obesity, cachexia or anorexia. The PGC-1 alpha nucleic acid molecules, polypeptides, antibodies and modulators are useful in drug screening assays or in gene therapy. The transgenic animals are useful in the burner of the screening assays or in gene therapy. The transgenic animals are useful in the burner of the screening assays or in gene therapy. The transgenic screening as and the compounds that are convolved with type I muscle formation. The present sequence represents a in the compounds that are convolved with the screening as the procession of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                F
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 15;

CC capable of modulating type I muscle formation comprising contacting a compound, and determining whether PGC-1 alpha expression or CC cativity is modulating type I muscle formation comprising a compound capable of treating a disorder associated with aberrant type I muscle formation or CC comprising assaying the ability of the compound identified by the CC method of (1) or (2); (4) a method for treating a subject having a CC disorder associated with aberrant type I muscle formation comprising a compound identified by the CC method of (1) or (2); (4) a method for treating a subject having a CC disorder associated with aberrant type I muscle formation comprising CC administering to the subject an agent capable of modulating PGC-1 alpha (CC expression or activity; (5) a method for increasing type I muscle formation in a subject comprising an exogenous PGC-1 alpha nucleic acid molecule, where the exogenous PGC-1 alpha nucleic acid molecule, where the exogenous PGC-1 alpha nucleic acid molecule; where the exogenous PGC-1 alpha nucleic acid molecule is CC expressed in the skeletal muscle of the animal. Expression vectors and CC expressed in the skeletal muscle of the animal. Expression vectors and cc cells comprising the PGC-1 alpha nucleic acids, and antibodies that specifically bind PGC-1 alpha polypeptides, are also described. PGC-1 alpha has cardiant, antidiabetic, anorecia, immunomodulator and continuous control of the approach of the animal. Expression vectors and condulating type I muscle formation or treating a disorder associated with aberrant type I muscle formation or treating a disorder associated with aberrant type I muscle formation. The present alpha nucleic acid conductors of the present sequence represents a mouse PGC-1 alpha promoter CRE nucleotide sequence, which is used in the excreening assays or in gene therapy. The transgenic animals are useful in cross-compounds that are converted in the present sequence represents a mouse PGC-1 alpha promoter CRE nucleotide sequence, which is used in the con

The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence is a Sequence Tagged Site (STS) marker, which was used to prepare a physical map of the Zmax1 (LRP5) gene region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid comprising a mutation in LRP5 or diagnosing a HBM-like phenotype in a subject and composition for modulating bone mass and/or lipid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-MAY-2001; 2001US-0290071P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 2299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method of determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder. The method comprises determining the genotype with at Cleast one marker of at least one chromosomal region linked to a locus associated with resistance to bipolar affective disorder, where the chromosomal regions are included of and localised between D45402 and CC chromosomal regions are included of and localised between D45402 and CC discloses a kit for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder, where the kit comprises markers for two or more of the chromosomal regions cited. The method and kit are useful for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder cin a family affected by bipolar affective disorder, for determining the CC contribution of these chromosomal regions to bipolar affective disorder in a affective family member, and for assessing an increased or decreased risk of developing bipolar illness for a tested individual from an affective family. ACA58053-ACA58292 represent primers used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

(I) is a polynucleotide comprising single nucleotide polymorphisms predicting cardiovascular disease. The polynucleotides are useful for assessing predisposition or susceptibility to a cardiovascular disease, e.g. atherosclerosis, ischemia/reperfusion, hypertension, restenosis, arterial inflammation, myocardial infarction, and stroke. These may also be used to predict personal medication schemes omitting adverse drug reactions, or as probes for detecting genetic polymorphisms and as templates for the recombinant production of normal or variant peptides/polypeptides encoded by the genes. This sequence corresponds to a PCR primer to amplify one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           high

Also described is a method (MI) for the treatment of acute coronary syndrome (ACS) in an individual comprising administering (I). (I) has antiatherosclerotic, cardiant and antianginal activities, and can be used as a leukotriene biosynthesis inhibitor, and a leukotriene receptor antagonist. (I) can be use for the manufacture of a medicament for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of identifying a subject at risk of melanoma comprising detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject. Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a subject at risk of melanoma, useful for treating melanoma, comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a

Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject, and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.
from a subject. Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated we melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP processing and compositions are useful for treating melanoma.
                                                                                                                                                                                                                                                                                                                         The invention relates to a method of identifying a subject at risk of melanoma comprising detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a subject at risk of melanoma, useful for treating melanoma, comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-NOV-2002; 2002US-0424475P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S X
                                               of breast cancer comprising detecting the presence or absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical drug trials. The current sequence is that of an Extend primer (also described as probe) of the invention which was used to genotype human intercellular adhesion molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor;BB2 C,CD54;cell surface glycoprotein p3.58) has been mapped to chromosomal position 19p13.2-cen and ICAM-5 (telencephalin) has been mapped to chromosomal position 19p13.2-cen and ICAM-5 (telencephalin) has been mapped to chromosomal position 19p13.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                      The present invention describes a method for detecting the presence of polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to detect the presence of genetic polymorphisms associated with inflammatory bowel disease and correlating their occurrence with disease states. They may used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a polymorphic site described in the exemplification of the invention

                                                                                                                                      CC A process has been developed for determining the sequence of a target culleic acid. The process comprises: (i) generating at least two CC fragments (F) from the target nucleic acid; and (ii) analysing F by mass CC spectrometry (MS). The sequences in AAV39483 to AAV39592 are specifically CC claimed primers for use in the mass spectrometric analysis of the above CC process. The process is used to detect genetic diseases (e.g. CC diseases, cystic fibrosis and many others) or chromosomal abnormalities CC diseases, cystic fibrosis and many others) or chromosomal abnormalities CC (or predisposition); infections and cancers; also for establishing CC identity and heredity. Particular applications are diagnosts of CC neuroblastoma, detecting telomerase, determining family relationships and CC methods using MS, this process requires fewer specific reagents and is better suited to automation. Extended primers are shorter; primer CC annealing is more efficient and the process allows detection of many CC conjacucleotide used in an example from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 cgene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CAAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA18385 and AAA19087 to Corresponding target sequences; AAA17685 to AAA18385 and AAA19086 and AAA19144 represent ribozyme sequences for Tie-2, and AAA19386 to AAA19086 and AAA19122 represent their corresponding target sequences; AAA19123 to AAA20361 and AAA21591 to AAA21595 represent tribozyme csequences for integrin alpha 6 subunit, and AAA20362 to AAA1500 and AAA21595 to AAA21689 to AAA21689 to AAA22475 and AAA2363 to AAA2363, AAA2364, AAA2365, AAA2367 savesent their corresponding target sequences; AAA21689 to AAA22475 and AAA2363 to AAA2366, AAA2366, AAA2367 savesent their corresponding target sequences; AAA21689 to AAA22475 and AAA2363 to AAA2366, AAA2366, AAA2367 savesent their corresponding target sequences; AAA21689 to AAA22475 and AAA2366 to AAA2366, AAA2366, AAA2367 savesent their corresponding target sequences;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipociatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;
                           AAA23422 represent their corresponding target sequences. The ribozymes (the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as mecvascular glaucoma, myopic dependantion, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of an mRNA encoding an angiogenic

CC cleaving activity, which specifically cleave KNA encoueu by an art. CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17685 to AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18335 and AAA18387 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 CC AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 CC AAA19233 to AAA2361 and AAA21501 to AAA21595 represent ribozyme sequences; CC AAA19223 to AAA2361 and AAA21501 to AAA21595 represent ribozyme sequences; CC AAA19233 to AAA2363 represent their corresponding target sequences; CC AAA21596 to AAA22475 and AAA2363 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23362, AAA23343 to CC AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are specially used to treat cancer, diabetic retinopathy, age related comeovascular degeneration (ARND), inflammation, and arthritis, as well as neovascular plaucoma, myopic degeneration, psoriasis, verruca vulgaris, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and the start syndromes and diseases related to the levels of ARNT, Tie-2, and the start syndromes and diseases related to the levels of ARNT.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SS X
cc hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 cg gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA17767 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, cand AAA17167 and AAA17560 and AAA17623 to AAA17684 represent their corresponding target sequences; AAA17625 to AAA18385 and AAA19087 to corresponding target sequences; AAA17685 to AAA19154 represent tribozyme sequences for Tie-2, and AAA19087 to AAA19154 represent tribozyme sequences for Tie-2, and AAA19087 to AAA191522 represent their corresponding target sequences; CC aAA19223 to AAA19222 represent their corresponding target sequences; CC aAA21585 to AAA21681 represent their corresponding target sequences; CC aAA21589 to AAA21681 represent their corresponding target sequences; CC aAA21689 to AAA21681 represent their corresponding target sequences; CC aAA21689 to AAA22475 and AAA2363 to AAA2342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23622, AAA23343 to aAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related cancular degeneration (ARMD), inflammation, and arthritis, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC desired nucleic acid (NA) that contains multiple repeats of a cc predetermined NA target sequence in a NA sample. The method involves conviding a treated sample that may contain the desired NA in which cc several predetermined repeating NA target sequences are hybridised with a cc NA probe, analysing for presence of hybridised NA containing the NA cc probe, and thereby the presence or absence of the desired NA. The method is useful for determining the presence or absence of desired nucleic cc acids that contain multiple repeats of a predetermined NA target cardenee, in a NA sample obtained from a biological sample, where the cc repeated sequence includes several predetermined repeated sequence that cdiffer in length and/or sequence. The methods can be efficiently used for cdistinguishing human and bacterial NA. The method is highly sensitive, cc and enables detection and quantification of the presence of a NA without the need to undergo a NA target sequence enrichment step prior to a NA cc hybrid detection step. The method enables rapid and accurate detection of a desired NA that contains multiple repeats of a NA target sequence. This sequence represents a probe used to detect the human Alu repeat sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 2311

             The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases including autoimmune diseases, degenerative nervous system diseases, graft versus host disease, hypersensitivity diseases, infectious diseases and neoplastic diseases. Autoimmune diseases include Addison's disease, atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those

Neoplastic diseases include lymphoproliferative disease such as leukaemias, lymphomas and cancers such as cancer of the brain, breast. The present sequence represents a Vbeta gene repeat sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gene expression; downregulation; interleukin-5; IL-5; ICAM-1; intercellular adhesion molecule; rel A; tumour necrosis factor; TNF-alpha; respiratory syncytial virus; RSV; bcr-abl; oncogene; translocation; chronic myelogenous leukaemia; CML; cancer; philadelphia chromosome; inflammation; autoimmune disease; atherosclerosis; myocardial infarction; stroke; restenosis; transplant rejection; rheumatoid arthritis; psoriasis; myocardial ischaemia; Kawasaki disease; septic shock; HIV; human immunodeficiency virus; acquired immune deficiency syndrom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 14

Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the ICAM-1 target sequences and thereby inhibit ICAM-1 expression, making them useful for reducing transplant rejection and alleviating symptoms in patients with rheumatoid arthritis, asthma and other infiammatory disorders.                                                                                                                                                                                                                                                                  The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the ICAM-1 target sequences and thereby inhibit ICAM-1 expression, making them useful for reducing transplant rejection and alleviating symptoms in patients with rheumatoid arthritis, asthma and other inflammatory disorders.                                                                                                                                                                                                                                                                                                      atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those manifested in leprosy. Infectious diseases include viral infections caused by viruses such as HIV, fungal infections such as those caused by the yeast genus Candida, parasitic infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by hypersensity of the yeast genus Candida, parasitic diffections such as those caused by schistosomes, filaria and bacterial infections such as those caused by hypobacterium. Neoplastic diseases include lymphoproliferative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Wbeta gene VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Kit for diagnozing and treating T-cell associated diseases e.g. autoimmune, degenerative nervous system and infectious disease, comprises nucleic acid primers specifically priming and allowing amplification of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  including autoimmune diseases, degenerative nervous system diseases, graft versus host disease, hypersensitivity diseases, infectious disease and neoplastic diseases. Autoimmune diseases include Addison's disease and neoplastic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 695; 164pp; English

CC This invention describes a novel nucleic acid containing a specific CC (vanilloid receptor type 1) receptor, or a functional derivative, allele CC or fragment of this region, or a sequence that hybridises to it under CC or fragment of this region, or a sequence that hybridises to it under CC positions 22191-223344 of GenBank AL670399, 31673-36359 of AL663116, or CC 44731-42331 or 36616-33151 of APIG8787 and is involved in transmission of CC describes a vector that contains the VR1 modulator, host cells containing CC this vector (other than human germ or embryonal stem cells) and a method CC modulator or the vector into a cell that contains the VR1 receptor by introducing the CC modulator or the vector into a cell that contains the VR1 gene. The CC products of the invention are used for detecting a transcription factor CC firm its binding to a regulatory sequence (or a double-stranded CC oligonucleotide fragment of it), e.g. by Western blotting or enzyme-CC associated with overexpression or underexpression of the transcription factor. The rucleic acids of the invention, or vectors containing them, CC are used for prevention or treatment of pain, also for treating them, CC are used for prevention or treatment of pain, also for treating containing them, CC are used for sequence represents a fragment of murine VR1 exon 1d DNA CC which is capable of binding to a transcription factor.

                                                                                                              cc heterologous sequence, diagnosing or prognosing glaucoma in a sample cobtained from a cell or bodily fluid (comprising detecting a polymorphism cc in a promoter region of the optineurin gene, associated with a glaucoma cphenotype), detecting a SNP sequence variation in a sample containing CC DNA, detecting the presence of an optineurin promoter sequence variation cc in a sample containing DNA, determining the presence or increased cc susceptibility to glaucoma or to a progressive ocular hypertensive cc disorder resulting in loss of visual field in a patient (or the severity corprogression of glaucoma in a patient, comprising providing cc nucleic acid region containing the variation within the optineurin cc promoter and amplifying the DNA) and detecting a polymorphism (comprising cobtaining a sample containing human genomic DNA, providing a nucleic acid cepable of detecting a SNP located within an optineurin promoter, and companies of the polymorphism. The invention is used to diagnose and compresent sequence is an optineurin promoter motif, repeat element or containing the promoter motif, repeat element or contains an optineurin promoter motif, repeat element or contains the optineurin promoter motif, repeat element or contains the optineurin promoter motif, repeat element or contains an optineurin promoter motif, repeat element or contains the optineurin promoter motif, repeat elem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid (N1) comprising at least 20 but not more than 1500 consecutive nucleotides of the optineur promoter appearing as ADE11390. Also included are the optineurin promot operably linked to a heterologous nucleic acid, a nucleic acid capable detecting a single nucleotide polymorphism (SNP) in the optineurin promoter, a host cell comprising the promoter operably linked to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid sequences of the optineurin gene are useful to detect polymorphisms particularly single nucleotide polymorphisms in the optineurin promoter to diagnose, prognose and treat glaucoma and relat

CC including autoimmune diseases, degenerative nervous system diseases, cc graft versus host diseases, hypersensitivity diseases, infectious diseases, cc and neoplastic diseases. Autoimmune diseases include Addison's disease, cc arrophic gastritis. Degenerative nervous system diseases include multiple clearosis and Alzheimer's disease. Hypersensitivity diseases include Type cc I hypersensitivities such as those present in cc allergies, Type II hypersensitivities such as those present in cc Goodpasture's syndrome and Type IV hypersensitivities such as those caused by cruses such as HIV, fungal infections such as those caused by cruses such as HIV, fungal infections such as those caused by chistosomes, filaria and bacterial infections such as those caused by cc Mycobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain, cc breast. The present sequence represents a Vbeta gene repeat sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  human; T-cell associated disease; Vbeta; autoimmune disease; degenerative nervous system disease; graft versus host disease; hypersensitivity disease; infectious disease; reoplastic disease; hypersensitivity disease; atrophic gastritis; degenerative nervous system disease; multiple sclerosis; alteriore edisease; hypersensitivity disease; type I hypersensitivity disease; type I hypersensitivity; Goodpasture's syndrome; altergy; type II hypersensitivity; Goodpasture's syndrome; type II hypersensitivity; leprosy; infection; disease; viral infection; schistosome; filaria; bacterial infection; parasitic infection; schistosome; filaria; bacterial infection; leprosy; 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADH70756 standard; DNA; 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Kit for diagnozing and treating T-cell associated diseases e.g. autoimmune, degenerative nervous system and infectious disease, compructeic acid primers specifically priming and allowing amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US2002150891-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                    CC markers. Mutations in the amplification primers for microsatellite CC markers. Mutations in the amplified sequences can be detected using the CC nucleic acid sequences of the invention (see AAT93326-T93354). The CC region of human chromosome 10 bounded by the markers D105541 and D105215. CC (I) is a tumour suppressor gene, particularly involved in prostatic CC cancer but also in melanoma, glioma and non-Hodgkin's lymphoma. Any CC nucleic acid that hybridises selectively to the specified chromosomal CC region can be used to determine susceptibility of a patient to cancer and CC for diagnosis/prognosis, sepecially of prostatic cancer, i.e. by CC treat cancer, especially when included in a viral vector. Similar CC treat cancer, sepecially when included in a viral vector. Similar CC treat cancer, sepecially when included in a viral vector. Similar CC molecules capable of hybridising to the protein, particularly antibodies. CC The labelled molecules when coupled to a cytotoxin can be used for cancer treatment. The encoded protein can be used to raise antibodies and these cused to screen DNA expression libraries or for polypeptide isolation. (I) CC allows differential diagnosis between neoplasia and hyperplasia of the prostate (all tumours with a log loss have lost this region) and concernination of micro-metastases in the blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 2320
AAA22845
                                               Cc cleaving activity, which specifically cleave RNA encoded by an aryl complete transporter (ARNT) gene, an integrin subunit beta 3 cc gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17562 and AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 cc and AAA19155 to AAA1222 represent their corresponding target sequences; CC AAA19154 represent alpha 6 subunit, and AAA21352 represent ribozyme cc sequences for integrin alpha 6 subunit, and AAA21352 to AAA21500 and AAA19259 to AAA22475 and AAA2363 to AAA21500 and AAA2369 to AAA22475 and AAA2363 to AAA2342 represent their corresponding target sequences; CC AAA23422 represent their corresponding target sequence for integrin subunit beta 3, and AAA23476 to AAA23262, AAA23343 to CC AAA23422 represent their corresponding target sequences of the invention are used for modulating the synthesis, expression and/or CC integrin subunit beta 3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related companies and companies. Kiupel-Trenaunav-Weber syndrome. Sturge Weber CC syndrome. Kiupel-Trenaunav-Weber syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S X
The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA, encoded by an aryl CC hydrocarbon nuclear transporter (ARNI) gene, an integrin subunit beta 3 cg gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNI, CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 cc and AAA19155 to AAA19222 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19086 cc and AAA19223 to AAA20361 and AAA19221 represent their corresponding target sequences; CC AAA21596 to AAA21688 represent their corresponding target sequences; CC AAA21596 to AAA21688 represent their corresponding target sequences; CC AAA21596 to AAA22475 and AAA23363 to AAA2332 to AAA21500 and CC stability of an are used for modulating the synthesis, expression and/or creating in the synthesis, expression and/or creating and companies factor, especially ARNIT, and and arthritis, as well as macular degeneration (ARMD), inflammation, and arthritis, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA171671 to AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA1364 represent their corresponding target sequences; AAA17655 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA20361 and AAA219017 corresponding target sequences; AAA19223 to AAA20361 and AAA21501 to AAA21505 represent ribozyme sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA1509 to AAA21688 represent their corresponding target sequences; AAA1689 to AAA22168 represent their corresponding target sequences; AAA21509 to AAA22363 and AAA23631 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA23476 to AAA23343 to AAA234342 represent their corresponding target sequences of AAA23422 represent their corresponding target sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaring angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammacory; antiarthritic; antipsoriatic; ARMD; dermatcological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; ss. cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme

Claim 54; Page 243; 305pp; English

WPI; 1999-591315/50.

The present invention describes enzymatic nucleic acid molecules with RNA

ribozymes for modulating the synthesis, expression and/or stability mRNA encoding an angiogenic factors.

The ribozymes the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; Osler-Weber-Rendu syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21688 represent their corresponding target sequences; AAA21689 to AAA22475 and AAA23263 to AAA23342 represent ribozyme seq for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to

XX PRANCE AND XX Novel of an an ribozymes mRNA encod encoding for modulating an angioge angiogenic the e synthesis, factors. expression and/or stability

Claim 54; Page 246; 305pp; English

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT,

AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for RNT, and AAA17168 to AAA17623 to AAA17633 to AAA17684 represent their corresponding target sequences; AAA17635 to AAA13885 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19227 represent their corresponding target sequences; AAA19086 and AAA19155 to AAA19237 and AAA19237 to AAA21689 to AAA21689 to AAA21689 to AAA21689 to AAA21689 to AAA21689 and AAA31689 to AAA21689 and AAA3368 to AAA23683 to AAA23687 and AAA33687 to AAA23687 and AAA23687 to AAA23687 and AAA33687 and AAA33687 and AAA23678 to AAA33687 and AAA33678 and AAA23478 and AAA33687 and AAA23678 and AAA33687 and AAA23678 and AAA23678 and AAA33687 and AAA23678 and AAA33687 and AAA33678 and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT; integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, vertuca vulgaris, angiotibroma of tuberous sclerosis, pot-wine stains, Sturge Weber
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 17 BP; 5 A; 1 C; 4 G; 0 T; 7 U; 0 Other;
                                     Enzymatic and antisense nucleic acid inhibition of repressor genes, useful for producing e.g. granulocyte colony stimulating factor pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ribozyme; erythropoietin; granulocyte colony stimulating factor; interferon alpha; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-FEB-2001

                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated 17 mer nucleic acid sequence, CC given in the specification, a sequence containing at least 15 consecutive CC nucleotides from the 17 mer sequence, a sequence with, after optimal CC alignment, at least 80 % identity to the 17 mer sequence, a sequence that (CC hybridizes to them under highly stringent conditions, or the complement (CC acids of them under highly stringent conditions, or the complement (CC acids of the invention are useful as probes and primers for detecting, CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one CC component of a gene chip, in vitro as (anti) sense reagents, and for CC production of recombinant polypeptides. Any of the nucleic acids, epilypeptides, vectors containing the nucleic acids, cells containing the vector or antibodies directed against the polypeptides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral CC degeneration, specifically cancer but also Alizheimer's disease and CC stitute and sense and containing the sense sense is useful for diagnosis and/or prognosis of these and containing the sense containing the sense and containing the sense c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABT36209 standard; DNA;
                                                                                                                                                                                                                                            diseases. The polypeptides can also be used to generate antibodies, and both the polypeptide and antibodies are useful as components of protein chips. The nucleic acid sequences of the invention can be used in gene therapy. This polynucleotide sequence represents a tumour suppression related human fukutin oligonucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 248;

                                                                                                                        RESULT 2330
                                                                                                                                                                                                                                                                                                                          The present invention relates to novel human zinc finger-containing CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is coded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, CC MDZ7 is encoded at chromosome 1fp11.2 and MDZ12 is encoded at chromosome 1fp11.2 and MDZ12 is encoded at chromosome CC 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, CC or in manufacturing a medicament for treating or preventing a disorder CC associated with decreased or increased expression or activity of MDZ3, CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic CC acids and proteins are also useful for diagnosing or monitoring a disease CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic CC acids can also be used as probes to detect and characterize gross CC useful in constructing microarrays for measuring gene expression. The CC useful in constructing microarrays for measuring gene expression. The CC vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                          RESULT 2331
                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome fpp1.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12. The probes are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; immunostimulant; gene therapy; vaccine; human; zinc finger protein; MDZ3; MDZ4; MDZ7; MDZ12; chromosome 7q22.1; chromosome 6p21.3-22.2; chromosome 16p11.2; chromosome 15q26.1; cancer; developmental disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-JUL-2002; 2002EP-00016874.
